

## Isaac Stella

---

New York, New York 10021 • idstella01@gmail.com • 617-505-9580 • Website • Github • LinkedIn

### Education

#### London School of Economics

MSc Economics

Coursework: Econometrics, Microeconomics, Macroeconomics, Portfolio Management, Asset Markets.

London, England

August 2026

#### McGill University

B.A., First Class Joint Honours Economics and Political Science; Minor Computer Science

Coursework: Probability, Statistics, Algorithms & Data Structures, Programming Languages & Paradigms, Discrete Math.

Montréal, Quebec

June 2025

#### Phillips Academy

High School Diploma, cum laude

Andover, Massachusetts

May 2020

### Projects

#### Machine Learning Tool for Detecting Innovation Mispricing

- Engineering a machine learning tool for detecting mispriced innovation in stock returns that predicts next-month returns with a neural network (PyTorch), evaluating with time-series cross-validation.

#### Equity Factor Backtesting Pipeline

- Built an end-to-end research pipeline in R that pulls CRSP and Compustat data via SQL from the WRDS database and assembles a clean firm-month panel of 1.5M observations (1990–2021), lagging accounting fundamentals to eliminate look-ahead bias.
- Computed value, momentum, and quality signals with vectorized rolling-window operations and ran CAPM and Fama-French five-factor regressions across FRED-defined rate regimes.

#### EPUB Annotation Injector

- Built a Python tool that parses note exports from e-readers and re-embeds them as native annotations, using tag-boundary-aware matching over the document's XML to map plain-text highlights back to their DOM positions.

#### Type Inference Algorithm and Type Checker

- Implemented a type inference algorithm/checker for OCaml using constraint solving-based inference.

#### Search Engine

- Programmed a Java-based search engine, modeling key features including graph-based crawling, ranking, indexing, and searching on input website data.

### Experience

#### McGill University

##### Research Assistant

- Analysed financial data with R and Stata on Federal Reserve and ECB spillovers under Dr. Santiago Camara.
- Used SVAR model to disentangle pure monetary policy shocks from information effects.

Montréal, Quebec

June 2025 – September 2025

### Skills & Interests

**Languages:** Python (pandas, NumPy, statsmodels, scikit-learn, PyTorch), R, SQL, Java, C++, JavaScript, OCaml

**Interests:** Modern Chinese history, endogenous growth theory, literary modernism, jazz guitar, coffee
